Installation

1. Ensure that you have vQmod installed.
2. Select the right version for your OpenCart.
3. Upload the files WITHIN the 'upload' folder to your OpenCart installation folder with a FTP client. The folders should merge.
4. In your admin panel, proceed to Extensions >> Modules (OpenCart 2.3.0.0 and above, go to Extensions >> Extensions and select 'Modules'). Then, install 'Quick Checkout'.
5. Configure module accordingly.

Upgrading:

1. Upzip the files. Ensure that the latest vQmod is installed.
2. Select the right version for your OpenCart.
3. Upload the files WITHIN the 'upload' folder to your OpenCart installation folder with a FTP client. Replace all files if prompted.
4. In admin panel, go to 'Extensions > Module' (OpenCart 2.3.0.0 and above, go to 'Extensions > Extensions' and select 'Modules') and edit 'Quick Checkout'.
5. Configure new settings accordingly.

Notes & Guides:

1. Should postal code be disabled from view, please ensure postal code is not set as required in System > Localisation > Countries > Edit
2. Should shipping methods require zip (postal) code for calculation of price, zip (postal) code field must be enabled.
3. To make postal code required / not required, do configure it in System > Localisation > Countries > Edit
4. To disable view of company ID and tax ID (OC 1.5.x), you can disable it from Sales > Customers > Customer Groups.
5. If survey is enabled, the response will be captured in the order comments.
6. If delivery date is enabled, the response will be captured in the order

comments

7. Use the {timer} syntax to display the timer within the countdown text.

8. If you are disabling the email field, do ensure you set a default value for the field.
